BOOK SYNOPSIS

"Ecology and Revolution: Global Crisis and the Political Challenge explores the global crisis in the context of converging economic, political, military, and environmental problems. While analyzing such issues as climate change it goes much further, addressing in depth such concerns as resource depletion, peak oil, population pressures, and general contamination of the planet transcending global warming as such. It shows how the present system of political economy in the United States is designed to produce impasse rather than genuine alternatives to corporate-state-military business as usual. It explores a range of solutions proffered by liberals, environmental reformists, anarchists, and classical marxists, among others, and shows how they are inadequate to the major political challenge of the current epoch. A distinctly radical alternative is urgently needed, as time is running short - an alternative that merges the best of the green political tradition, marxist socialism, and the force of popular movements -something akin to what the European Greens represented a few decades ago but which ran aground on the process of deradicalization. This book sets out to provide a comprehensive ecological analysis of the modern crisis within its broader economic, political, and global context"--
